for the molal (m) case, where a_{H^+} is the hydrogen ion activity, γ_{H^+} and f_{H^+} are activity coefficients of the hydrogen species in their respective proton scales. pH can be measured based on multiple assumptions, which we will discuss below. Also, chemical equilibrium models can be used to calculate activity coefficients and solution concentrations, which allow estimation of pH.

In chemistry, a coordination complex consists of a central atom or ion, which is usually metallic and is called the coordination centre, and a surrounding array of bound molecules or ions, that are in turn known as ligands or complexing agents. Many metal-containing compounds, especially those of transition metals, are coordination complexes. A coordination complex whose centre is a metal atom ...
